Chart 1. Matched Taxable Gross Receipts Per Quarter

The fourth quarter of FY20 is the first full quarter of economic impacts from the COVID-19 pandemic. Business closures and reduced consumer spending locally began to take effect at the end of March. Since then, the state instituted reopening phases designed to slow the spread of the virus while providing a systematic approach to reopening the economy. However, the continuation of the COVID-19 health crisis and the subsequent closures of many businesses statewide caused downward trends in matched taxable gross receipts across the state.

Taos County has seen a significant drop in its matched taxable gross receipts (MTGR) from Q3 FY20 to Q4 FY20, as seen in Chart 1. A decrease from Q3 to Q4 is consistent dating back to FY18. The size of the drop off in FY20 is, however, larger than average. FY20 saw a decrease of 20%, while FY19 saw a decrease of 11% and FY18 a decrease of 5%. Table 1, on the next page, shows a decrease of \$9.5M from Q4 in FY19 to FY20 of the same period.

Chart 2. FY20 - Q4 Industry Size by Matched Taxable Gross Receipts

Matched Taxable Gross Receipts (MTGR) is the best tax data available to show underlying economic activity. It matches a tax payment with reported receipts for each taxpayer, by industry.

Quarterly GRT collections, as seen in Chart 4, show a decrease of \$416K or 20% from Q3 FY20 to Q4 FY20. Despite this decrease and the downward trending quarterly collections for FY20, the annual collections, in FY20, were still higher than FY19, as seen in Chart 3. From FY19 to FY20, annual collections increased by roughly \$1.2M or 16%.

HB6, passed in 2019, made widespread tax changes within New Mexico. One notable change is the conversion to destination-based sourcing that will begin after a two-year delay. During the 2020 Special Session, that legislation was amended, increasing a temporary distribution to municipalities and counties. Now municipalities will receive a distribution that is a portion of \$2.5 million while counties will receive a distribution that is a portion of \$1.5 million. The amounts distributed will be proportional to the size of the community's population versus that of the entire group. These amounts are subject to change if the federal government provides municipalities and counties future grants to offset revenue declines attributable to COVID-19.

Chart 6. Quarterly Initial Unemployment Claims

New Mexico receives over \$6 billion each year through federal programs which benefit the entire community: health care, nutrition, highways, education, housing, jobs and more that allocate funds on per capita basis. Each New Mexican not counted equates to a loss of approximately \$3,745 in funding per year. If New Mexico undercounts residents by only 1%, the state would lose \$780 million in revenue over the next 10 years.

A significant unexplained increase in initial unemployment claims can be an early indicator of an economic downturn. Explained increases commonly include seasonal job fluctuations, federal government shutdowns resulting in employee furloughs, or the closing of a major regional facility. This unprecedented uptick in initial unemployment claims is obviously tied directly to the COVID-19 pandemic and subsequent furloughs and layoffs by affected businesses. As the phased reopening continues, it is likely the number of initial unemployment claims will flatten out and then decrease, but it is impossible to predict how quickly the employment numbers will return to pre-COVID levels.
