Chart 1. Matched Taxable Gross Receipts Per Quarter

New Mexico suffered another challenging quarter in Q2 FY20 compared to the previous year. The effects of the pandemic weighed heavily on business and consumer activity, and 18 of the 33 counties saw declines in year-over-year gross receipts tax revenue. Of the 15 with positive growth, several only experienced increases due to large construction projects. A new Public Health Order, which took effect on November 16, required many businesses to curb retail activities again to address the surge in COVID-19 cases.

Curry County saw a slight increase in its matched taxable gross receipts (MTGR) from Q1 FY21 to Q2 FY21, as seen in Chart 1. From Q1 FY21 to Q2 FY21 MTGR increased by nearly 6%, or \$13M. Table 1, on the next page, shows an increase of \$7M from Q2 in FY20 to FY21 of the same period. This year-over-year (YOY) increase was driven by the construction industry, which reported growth of nearly \$9M, or 25%.

Chart 2. FY21 - Q2 Industry Size by Matched Taxable Gross Receipts

**Matched Taxable Gross Receipts (MTGR)** are the best tax data available to show underlying economic activity. The data collection process matches a tax payment with reported receipts for each taxpayer by industry.

Gross receipts tax (GRT) revenue collections increased slightly in Q2 FY21, shown in Chart 4. This increase is almost exclusively due to an increase in the county environmental collection, which saw a \$31K increase from Q1 FY21 to Q2 FY21.

Chart 5 shows that the average weekly wage increased while quarterly employment decreased during Q4 of FY20. This increase is likely due to the loss of lower wage workers.

Chart 6. Quarterly Initial Unemployment Claims

A significant unexplained increase in initial unemployment claims can be an early indicator of an economic downturn. Examples include seasonal job fluctuations, federal government shutdowns resulting in employee furloughs, or the closing of a major regional facility. The current unprecedented uptick in initial unemployment claims is tied directly to the COVID-19 pandemic and subsequent furloughs and layoffs by affected businesses. As we continue into 2021, it is likely the number of initial unemployment claims will vary based on the effects of the pandemic, and it is impossible to predict how quickly employment numbers will return to pre-COVID-19 levels.

**Gross Domestic Product (GDP)** is the value of all goods and services produced in an area. The percentage that GDP grew (or shrank) from one period to another is an important indicator as to how the economy is performing. Table 2, below, shows the percentage of GDP each industry accounts for in the total GDP, in a specific county and the state. The chart also compares the county to the entire state of New Mexico, by showing the impact of specific industry sectors on the county's GDP compared to that of the whole state.
